DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in WIPO on 04 May 2004. It is noted, however, that applicant has not filed a certified copy of the PCT/EPO2/04900 application as required by 35 U.S.C. 119(b).

Claim Objection

2. Claim 51 is objected to because of a minor spelling error, "pro jection".

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 51 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 51 is purported to be a method claim, but there are no steps disclosed for the method.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2851

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1 – 9, 11 – 19, and 46 are rejected under 35 U.S.C. 102(b) as being anticipated by McGuire (US 2003/0086171).

McGuire has a method of reducing aberrations in a projection exposure apparatus for microlithography which inherently has a light source, an illumination system, mask and object positioning means and a projection lens. The method may be used in optical systems having a wavelength of less than 248 nm and even as low as 157 nm (see paragraph [0260]) and having a numerical aperture of 0.60 – 0.90 or even higher (see col. 4, lines 1 – 5). Fig. 46 shows an optical element 510 which is a 90° polarization rotator with a zero thickness to compensate for birefringence. The possible material composition of the birefringent lens is given in paragraph [0260]. The rotators may be made of quartz (see paragraph [0197]). The system may comprise more than one manifold (see paragraph [0258]). The reference suggests wedges, such as which element would have a locally varying thickness.

Allowable Subject Matter

7. Claims 10, 20 – 45, 47, and 48 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: The correction means is not a final lens and is not stress induced position dependent element.
